

Program Information Report

CTCPMC

School of Information Technology

The School of Information Technology gathers the diverse areas that make up the computer technology of today. From basic programming languages to systems development through networking, these programs provide the core of information technology. Develop skills in computer networking or programming in the growing field of applied information technology.

Washtenaw Community College offers programs at several levels for students who want to begin new careers, or advance in their existing careers. The first level is the certificate, which can vary from nine to thirty-six credits, depending on the field. Certificates generally prepare students for entry-level jobs.

After completing a certificate, students can progress to the next level, the advanced certificate. The credit hours required for these programs also vary. This type of certificate provides a more specialized level of skill development, and often allows students to upgrade their positions at their places of employment.

The next level, an Associate in Applied Science, is available for some programs. For some career fields, it is possible to earn a certificate, an advanced certificate, and an Associate in Applied Science degree in the same field. In these cases, the credit hours from the certificate and advanced certificate can be applied to the credit hours needed for the Associate in Applied Science degree.

Alternatively, students can earn an AAS in Occupational Studies by completing a certificate, an advanced certificate (if it exists) and General Education requirements.

Programming

Learn the foundation of computer programming or specialize in a programming language through these programs.

Program Information Report

**C# Programming for Modern Computing Environments (CTCPMC)
Certificate**

Program Effective Term: Fall 2015

This program focuses on one of today's most in-demand programming platforms, C#.Net. Students progress through a series of courses starting with basic computing logic and algorithm development, database theory, and object-oriented programming techniques. The program culminates in a hands-on capstone project targeting the creation of an application for modern embedded computer environments. The skills learned in this program will be adaptable to the development of mobile apps, embedded apps, connected vehicle applications and intelligent transportation systems, infotainment applications, desktop applications, and applications for Internet devices.

Program Admission Requirements:

Prior knowledge of the Hypertext Markup Language (HTML), Cascading Style Sheets (CSS), networking fundamentals, client/server architecture, and basic electricity/electronics is recommended. Suggested courses include:

- ELE 111 Electrical Fundamentals
- ELE 211 Basic Electronics
- CST 225 PC Networking
- WEB 110 Web Development I

Continuing Eligibility Requirements:

Students must maintain a "B-" grade point average in program requirements.

CPS 120	Introduction to Computer Science	3
CPS 192	Introduction to C#.Net	4
CPS 292	Intermediate and Advanced C#.Net	4
CIS 282	Database Principles and Application	3
CPS 296	Connected Device Projects with C#.Net	4

Minimum Credits Required for the Program: 18

PROGRAM PROPOSAL FORM

- Preliminary Approval** – Check here when using this form for preliminary approval of a program proposal, and respond to the items in general terms.
- Final Approval** – Check here when completing this form after the Vice President for Instruction has given preliminary approval to a program proposal. For final approval, complete information must be provided for each item.

Cert. <input type="checkbox"/> Post-Assoc. Cert. <input type="checkbox"/> Cert. of Comp.</p> <p><u>Fall 2015</u></p> <p><u>Khaled Mansour</u></p>		
<p>Program Features Program's purpose and its goals. Criteria for entry into the program, along with projected enrollment figures. Connection to other WCC programs, as well as accrediting agencies or professional organizations. Special features of the program.</p>	<p>Desktop applications, mobile applications and embedded applications are developed with a variety of software tools and in a variety of programming languages. The C# Programming language developed by Microsoft is a modern and important general purpose programming language that can be used to develop applications in all three environments. Due to recent enhancements in C#, and to the availability of universal development environments such as Xamarin, the cross platform capabilities of C# and appeal to developers has increased dramatically. It is now one of the most important development platforms available to developers. This academic program is designed to capitalize on the current popularity of C# and structure course offerings into a traditional computer science CS-1, CS-2, Capstone Project sequence that will accommodate novice and experienced programming students alike. Additionally, capstone projects will focus on embedded systems programming, the Internet of Things, and the Connected Vehicle, all important drivers of technology for the next decade or more.</p>		
<p>Need Need for the program with evidence to support the stated need.</p>	<p>Indeed.com job postings as of January 11, 2015 revealed a total of 377 postings for developers having skills in C# and the .Net platform on which it is based. This compares very favorably to 566 postings for Java Developers as of the same date. In November of 2014, Microsoft began the process of open sourcing components of C# and the .Net development platforms to developers. This is expected to drive down the costs associated with development in C# and drive up the number of requests for development of applications on the platform. No longer novel or boutique, C# has become an important tool for software developers, and the sequence of courses proposed in this certificate more thoroughly prepares students to develop with C# and for a variety of computing platforms.</p>		
<p>Program Outcomes/Assessment State the knowledge to be gained, skills to be learned, and attitudes to be developed by students in the program. Include assessment methods that will be used to determine the effectiveness of the program.</p>	<table border="1" style="width: 100%;"> <tr> <td style="width: 60%; vertical-align: top;"> <p><u>Outcomes</u></p> <ol style="list-style-type: none"> 1. Conduct a requirements analysis and produce software requirements specifications for a moderately complex application project. 2. Apply software design principles to determine activities required to conceptualize, frame and implement the application. 3. Implement the software design in C# .Net. 4. Test the implementation according to sound software testing principles. </td> <td style="width: 40%; vertical-align: top;"> <p><u>Assessment method</u></p> <p>1-5. Assessment plan:

Program outcomes to be assessed	Assessment tool	When assessment will take place	Courses/other populations	Number students to be assessed
1. Conduct a requirements analysis and produce software requirements specifications for a moderately complex application project.	Software project ✓	Winter 2017	CPS 296: Embedded Systems Software Project - All sections ✓	All students ✓
2. Apply software design principles to determine activities required to conceptualize, frame and implement the application.	Software project ✓	Winter 2017	CPS 296: Embedded Systems Software Project - All sections ✓	All students ✓
3. Implement the software design in C# .Net.	Software project ✓	Winter 2017	CPS 296: Embedded Systems Software Project - All sections ✓	All students ✓
4. Test the implementation according to sound software testing principles.	Software project ✓	Winter 2017	CPS 296: Embedded Systems Software Project - All sections ✓	All students ✓
5. Successfully deploy the application.	Software project ✓	Winter 2017	CPS 296: Embedded Systems Software Project - All sections ✓	All students ✓

Scoring and analysis plan:

1. Indicate how the above assessment(s) will be scored and evaluated (e.g. departmentally-developed rubric, external evaluation, other). Attach the rubric. **Departmentally-developed rubric.**

2. Indicate the standard of success to be used for this assessment. **The standard of success will be that 70% of the students will score 70% or higher on the assessment tool.**

s

3. Indicate who will score and analyze the data. **Departmental Faculty.**

4. Explain how and when the assessment results will be used for program improvement. The results of the program assessment should be available at the conclusion of the Winter 2017 semester. With the assessment results, the department will evaluate the program's impact on student success, relevancy of course and program content, and consistency in delivery of course content. The results will be shared with a panel of individuals, including advisory committee members from Industry, for comment and recommendations.
