

6903 HFC Men's Locker Room Flooring Replacement Questions/Answers

A concern was raised regarding the safety of members of the HFC if the demolition of the flooring was to take place during daytime hours. This is due to the operating equipment required for the job, space constraints, debris, and other potential safety considerations.

The department's preference would be to have the demolition and installation work performed after hours. If a responding vendor believes the work can be safely performed during daytime hours, two pods at a time, please provide a detailed description of your proposed method for addressing member safety, equipment operation, debris containment, and any other relevant safety concerns in your bid narrative. Otherwise, please provide a quote for the evening-hours alternative option.
